Map Creation

Map Layouts

Use different map layouts depending on the task;

- Traditional organic Mind Map view
- Output tree for presentations, and brainstorming
- Organogram to create organisation charts
- Affinity diagrams for grouping information post brainstorming
- Input tree for cause and effect analysis
- Outline to preview documents prior to export
- More...

Type & Return

The ability to just start typing then hit the return key is simple, unique and the quickest most unobtrusive way to capture information.

Ability to add; Child, Sibling and Parent branches

Question Sets

Unique to MindGenius, they provide a framework for brainstorming, problem solving, strategy, planning, requirements gathering, meetings, customer facing sessions, etc.

Select from a list of default question sets or create your own.

Map Explorer

The Map explorer is unique to MindGenius and facilitates the navigation of large maps allowing you to move quickly between the high level and detailed views of a project without having to create a series of linked maps.

Timer

Manage Brainstorming sessions and keep meetings and presentations on track. Always displays on top.

Set Duration, Count up / Count Down

Map Navigation & Management

The map explorer is unique to MindGenius, it can be displayed or hidden in the left hand panel and acts as an outline for your entire map allowing you to quickly focus in on one area of the map in isolation.

Zoom slider, Auto Zoom, Display Levels, Pan Mode

Map Formatting & Building

Map Styles

Customize the look and feel of your maps.

Select from the Map Style Gallery

Create your own styles

Include branch numbering

Map Layout

Auto Colour

Branch Style

Style the look of individual branches.

Branch shapes, Text font & color, Branch fill, Connector style, Arrow heads

Apply Local Layouts

Make best use of white space and emphasize areas of your map by applying different layouts to areas of your map.

Add Attachments

Create dashboards of information by linking to other maps, documents and web content.

Notes Editor

Support the map topics with additional notes.

Rich text, Images, Tables.

Add Pictures

Improve presentations and make maps more memorable by adding images from your own PC or from the Picture Gallery.

100's of images in the Picture Gallery

Add Floating Pictures

Add Picture to Branches

Floating Text

Annotate your map with Floating Text.

Mental Connections

Links branches to Identify task dependencies and relationships.

Aids problem solving, understanding and breakthrough thinking.

Analysis

Categories

Predefined category sets allow you to quickly analyze and understand your gathered information.

Brainstorming grouping

Impact analysis

Decision making

Performance review

Risk

More.....

Create your own categories.

Create category map

Advanced analysis, turn your map information inside out by automatically creating an affinity diagram based on the applied map categories.

Category Dropper

Quickly apply categories to the map branches.

Map Filter

Analyze and view only the relevant information.

Quick filter – One click filtering of currently used categories

Advanced query builder

Hide non matching branches

Task and Project management

Integrated Gantt View

Project management capability within MindGenius without the need to export to other applications.

Switch seamlessly between map and Gantt view

Schedule tasks

Add resources

Identify critical path

Integrates with quick filters

Focus using the map explorer

Identify milestones

Import resources from Outlook

No need to re-enter names and email addresses. Imported resources can then be assigned actions and automatically notified.

Resource Gallery

Define and display a resource group for a project.

Resource Dropper

Quickly apply resources to the map branches

Task Properties

Easily record task properties and manage to-do lists and projects to completion within the map.

Start date, Due Date, Priority, Status, Duration, etc.

Create Resource map

Get clarity on a project and automatically generate personalized task lists by creating an affinity diagram based on the applied resources.

Add Cost and Quantity data

Cost projects and create parts lists using Export to Excel

Action Filter

See the project status and manage tasks within the map environment.

Quick filter

Actions overdue

Due this week

Advanced filter – Build complex queries

More.....

Data Sort

Sort and organize the map branches by;

Due date, Priority, Status, More....

Export to Excel

Allows you to manage tasks and perform further analysis of categories, cost and quantity data within excel.

Export to MS Project

Automatically create a fully structured MS Project file from the map hierarchy.

Presentation

Presentation mode

Create dynamic slides that automatically update when the map updates

Add text, images and notes

Add slide transitions and backgrounds

Update map slides during the presentation

Distribute printed and pdf versions of your presentation

Export to Powerpoint

Communication, Import & Export

Send actions to Outlook

Communicate actions to attendees immediately after meetings, brainstorming sessions, planning sessions, etc.

Send Map as email attachment

Distribute and share map information

Send Map as email attachment with preview

Allows email recipients without MindGenius installed (all devices) to preview the map

Send map and attachments as package

Easily distribute the map and all associated attachments

Export to MS Word

Ensure that the document contents and structure have been effectively developed before exporting to MS Word

Import MS Word files

The complexity of Tender, Strategy or Legal documents can be more easily understood as the constituent parts become clearer when visually represented

Export to MS Project

Ensure Project success by fully identifying the project tasks and structure before exporting to MS Project

Import MS Project files

Easily restructure and define new project phases in the map format

Export to MS Powerpoint

Develop engaging presentations by developing comprehensive content and logical structure before exporting to MS Powerpoint.

Export to MS Excel

Extend the use of your map in Excel; Perform Pivot table analysis, manage tasks, develop parts lists, perform calculations, etc.

Export to PDF

Create a fully structured document with map images and text to communicate beyond MindGenius users.

Import MindManager Files

Import directly into MindGenius

Import and Export Freemind Files

Exchange files directly with Freemind

Export map as HTML

Create structured HTML documents and web pages

Export Map as Image

Save the map in common graphic formats for distribution and publishing in other applications.

Mobile Integration

Import & Export iThoughts files (iPhone & iPad)

Exchange maps created in iThoughts for iPhone & iPad applications.

Import & Export Thinking Space files (Android)

Exchange maps created in Thinking Space for Android

Import & Export OPML files

Exchange maps created in certain iPhone/iPad applications directly with MindGenius

Windows Integration

Windows Desktop Search

Allowing users to search for branch titles, attachment names, resources and notes within map files from the Desktop.

Windows Explorer – Map Preview

Allows users to preview a map without the need to open the file in Windows Explorer.

MS Outlook – Map Preview

Allows users to preview map attachments without the need to open the file in MS Outlook.

Proofing & Printing

Printing

Ensure maps are printed for optimal readability use;

Auto orientation

Split map (Level 1 & Page breaks)

Proofing

Ensure that documents have been effectively proofed before submission or distribution.

Find, Replace, Spell check, Word Count

Help & Support

Sample Maps

Get ideas and see how others have used MindGenius.

Templates

Make a quick start on certain tasks using pre installed templates or Create and share your own templates.

Help File

Step by step instructions on using the application functions.
