Getting Started

Select the **'New Blank Map'** tile from the Templates pane on the right hand side or click the category tiles to browse the many templates provided to help you get started.

You can also start a new map using the Icon in the Top Right of the Screen. Each time a new map is created, you are prompted to enter a title for the core branch of the map.

Type the title of your map then hit the **Return key** on the keyboard.

To add a new child branch simply **Start Typing**.

Complete typing then hit the **Return** key when finished.

Click on a Branch to select it.

Double click on a Branch to edit the title.

Use the **Insert** key to add a child branch or select **Return** to add a sibling branch.

Using **Type & Return** is the quickest way to add branches.

Continue to Type and Return to build your map and add all of your ideas.

Note:

You can switch OFF the Welcome Map by clicking the "Show Welcome Map" button in the Tools ribbon.

You can hide the Templates Pane by clicking the "Show Templates" button on the Home ribbon, or clicking the right-facing arrow at the top-right edge of the Templates Gallery.

Use **Drag & Drop** to move branches to a new position and add structure to your map.

Click on a branch and drag it to a new position.

As you drag a branch across the map its' new position will be shown in relation to existing branches.

Drop above, below or as a child of another branch

Change the overall layout of your map using the **Map Layouts** option on the Home ribbon.

As your map builds in size, **Expand & Collapse** sections using the plus/minus symbols on the branches, use the **Zoom, Auto-Zoom** and **Display Levels** options on the Home ribbon and use the **Map Explorer** on the left hand side to navigate your information.

The **Map Explorer** on the left hand side is automatically created as you build you map in the main window.

Expand and collapse the sections to drill up and down through your map.

Selecting a topic in the Map Explorer makes that branch the focus in the main window.

The Pan function enables you to bring the selected branch into the centre of the screen.

Using Categories

Analysis tools let you categorize, filter and take different views of your data.

In this guide you'll learn how to:

- Apply categories
- Filter
- Create new views

Categories are contained in the category gallery; part of the Analyze tab.

Click the bottom arrow next to the gallery to display the default category sets.

With the gallery open, hover your mouse over the 'More Categories' menu to reveal all of the available category sets. Select the set name to add it to the gallery.

To start assigning categories to your map, first select the branch or branches that you want to assign a particular category to.

Click the category icon you want to assign.

Continue adding categories by selecting one or more branches and then clicking the category icon.

The **Category Dropper** tool allows you to 'pick up' one or more categories from the category gallery and assign them by clicking on the branch.

You can scroll or pan around the map without losing the selection in your dropper. Click on the Dropper Tool again to deselect it.

Use the **Create/Rename categories** option in the Gallery menu to modify the Categories associated with this map.

See the **Creating New Category Sets** section to configure the default set of categories available each time you create a new map.

Filtering

Filter your map using the Analysis Filter command group found on the Analyze tab.

Open the Quick Filter menu by clicking the lower half of the Quick Filter button.

The Quick Filter menu automatically updates to show categories currently assigned in your map.

Filter on a category by selecting it from the Quick Filter menu.

MindGenius will normally apply a grey tint to branches that fail your filter criteria.

You can also choose to hide them altogether by clicking the 'Hide non-matches' button.

Clear an applied filter by clicking the 'Clear' button. If non-matching branches are greyed the grey tint will be removed and if non-matches are hidden they will become visible once more.

Filters that combine multiple properties, e.g. categories and resources are possible using the Quick Filter Panel, accessed by selecting Launch **Quick Filter Panel** from the Quick Filter menu.

Click **Create Category map** to create a new map structured and based on the applied categories.

Creating New Category Sets

Use this section to create new category sets that will be applied to all new maps.

Start creating custom categories by switching to the Tools tab and clicking the Options button. When the Options dialog is displayed, click the Categories tab.

Categories are organized in to groups.

Add a new group to house your custom categories by clicking the 'Create a new category group' link.

Type a name for your custom category group and press Enter to add it to your category list.

To start adding categories to your new group, select the group name from the list and then click the 'Create a new category' link.

Add icons to your categories by selecting a category and clicking the Add Icon button.

(Icons should be in Portable Network Graphics (.png) format and 16x16 pixels in size. Even the most basic graphics packages, e.g. Microsoft Paint, can create this format.)

Click OK to save your custom categories.

To add your custom categories to your category gallery, open the gallery, click More Categories and select your custom group name.

Applications

Categories can be applied for many purposes; helping get clarity on ideas captured during a brainstorming session, reviewing documentation, identifying priorities/severities/risks, to indicate project status, etc.

Task Management

The **Tasks ribbon** contains all the commands and fields necessary to keep track of the actions in your map, when they're due to be completed and who's responsible for them.

In this guide you'll learn how to:

- Create and import resources
- Assign resources to tasks
- Schedule tasks
- Filter
- Create a resource map

Creating Resources

Resources are the people you assign to tasks. MindGenius is pre-configured with four placeholder resources. You'll see these resources in the resource gallery.

Start editing resources by clicking the arrow in the bottom-right corner of the Resources command group.

The Edit Resource List dialog is used to add, edit or remove resources.

To add resources of your own, type their full name into the box at the top of the dialog. (Or use the 'New...' button)

To enter multiple names at the same time separate each full name with a comma.

Press the Enter key to add the names to your resource list.

Notice that MindGenius has automatically worked out the initials for your resources based on the spaces in their names. You can edit these if necessary.

When you add new resources this way they're automatically marked as 'favorites'. Only favorite resources are displayed in the resource gallery.

To exclude a resource from your resource gallery, uncheck the checkbox beside their name.

Click OK to save your new resources.

Importing Resources

MindGenius can import contacts from Outlook for use as resources.

To start importing contacts, select File/ Import then select MS Outlook from the sub panel.

Choose whether to import contacts or a specific address list and click OK.

Place a checkmark in the checkbox beside each contact you want to import. If you want to add all your imported contacts to your resource gallery immediately, check the 'Mark all imported resources as favorites' checkbox.

Click OK to start the import.

Assigning Resources

Resources are assigned to your branches via the resources gallery.

To assign a resource to a branch, select one or more branches in your map, then click the name of a resource in the resource gallery.

The resource will be assigned to all selected branches.

Resources are displayed on the branch using their initials.

Selecting a branch with a resource assigned will highlight the full name of the assigned resource(s) in the resource gallery.

If you need to assign a resource in several places throughout your map you can use the **Resource Dropper** tool.

The Resource Dropper tool allows you to 'pick up' one or more resources and 'drop' them onto branches simply by clicking over the branch.

To use the dropper tool click the Resource Dropper button, then click one or more resources names in the resource gallery. You can then drop the resource(s) onto your map.

Once you have assigned Resources, try selecting the **Create Resource Map** option to produce a new map with all tasks organized by the individual resources.

Scheduling Tasks

Tasks can use all or a combination of the following information, set via the Task Schedule group of the Tasks tab:

Property	Meaning
Start date	The date on which your task is scheduled to start
Due date	The date on which your task is scheduled to end
End date	The date on which your task did end
Percent complete	The current completion state of the task in percent
Priority	The current priority of the task, e.g. High
Status	The current status of the task, e.g. In Progress
Duration	The length of time the task is scheduled to take

ALYZE **TASKS** EXPORT TOOLS

Start: %: Priority: Cost:

Due: Status: Work: Qty: Complete Task Clear Task

End: Duration:

Task Properties

To set task information for a branch you should first select the branch within the map.

When one or more branches are selected the task property fields will change from being disabled (you can't select or add information) to being enabled.

To create a task in its most basic form, first set a **Due date**.

When you add a due date a calendar icon appears on the branch. This signifies that a date has been set. You can see the date by moving your mouse over the calendar icon.

When you assign a priority value a task bar icon appears on the branch. This signifies that a priority has been set and the task has not been started. You can see the priority by moving your mouse over the task bar icon.

Lastly, estimate the **Duration** of your task. Task durations can be specified in hours or days and can be decimal values, e.g. 1.5 days.

Task Management Filters

Use the Task Filter section on the Tasks Ribbon to filter your map based on the task properties.

Select one of the pre-defined filters from the list or select the **Launch Quick Filter Panel** to filter on multiple branch properties.

The **Launch Filter Builder** allows you to build complex queries.

Note: To use the 'Tasks assigned to me' option, you must tell MindGenius who 'you' are.

To do that, switch to the Tools tab and click the Options button and type your full name (as it appears in the Resource list) into the Default Map Author field.

MindGenius will normally apply a grey tint to branches that fail your filter criteria.

You can also choose to hide them altogether by clicking the 'Hide non-matches' button.

You can also Clear the filter, as well as refreshing the filter to include branches you have added recently.

Clear an applied filter by clicking the 'Clear' button. If non-matching branches are greyed the grey tint will be removed and if non-matches are hidden they will become visible once more.

Task Information Cards

Task cards allow the branch task properties to be permanently displayed in small post-it cards under each branch.

Task cards are turned on and off via the **View Task Info** menu on the Tasks ribbon.

To view task information cards for all branches:

- Switch to the Tasks ribbon
- Click the top half of the View Task Info command

To view task information cards for selected branches:

- Switch to the Tasks ribbon
- Click the bottom half of the View Task Info command and click Selection

To view task information cards for branches in the current view:

- Switch to the Tasks ribbon
- Click the bottom half of the View Task Info command and click Current view

Branches that don't have task properties set will not have an associated task card until a task property is set.

Task cards are automatically coloured based on whether they've reached or exceeded their due date (non-Gantt mode) or their end date (Gantt mode).

Colour	Meaning
	Task has not yet reached its due date (non-Gantt mode) Task has not yet reached its scheduled end date (Gantt mode)
	Task is due today but has not yet exceeded its due date (non-Gantt mode). Task is scheduled to end today but has not yet exceeded its end date (Gantt mode).
	Task has exceeded its due date (non-Gantt mode). Task has exceeded its scheduled end date (Gantt mode)

To turn off task information cards for the whole map, switch to the Tasks ribbon and click the top half of the View Task Info command to toggle off.

To hide individual task information cards, switch to the Tasks ribbon, select branches whose information cards you want to hide (Use Ctrl+click to select multiple branches) then click the bottom half of the View Task Info command and click Selection.
